Abstracts

The global Liquid Cooling Loop Fluid Management Components market size is expected to reach $ 9561 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

Liquid-cooling-loop fluid-management components are filters, circulation pumps and coolant-control valves installed inside a single-phase closed liquid-cooling system and directly exposed to water, water-glycol, PAO or another engineered coolant. Filters capture metal particles, corrosion products, seal debris and biological solids; pumps generate controlled flow and pressure; shut-off, check, bypass, proportional, multi-way and thermostatic valves provide isolation, routing, flow and temperature control. The value chain is “filter media, motors, bearings, magnets, seals, valve internals and actuators ? filters, pumps and valves ? thermal modules/CDUs/liquid-cooling systems ? AI data centers, automotive OEMs and aircraft/avionics OEMs.” The scope excludes cooling-tower water treatment, utility-scale RO/UF equipment, cold plates, heat exchangers, hoses, quick couplings, refrigerant compressors, engine-lubrication pumps and aircraft-fuel pumps. Product gross profit margins typically fluctuate between 20% and 40%.
