According to our (Global Info Research) latest study, the global Liquid Cooling System EPDM Hose market size was valued at US\$ 502 million in 2025 and is forecast to a readjusted size of US\$ 828 million by 2032 with a CAGR of 7.5% during review period.

Liquid Cooling System EPDM Hose refers to a flexible hose made primarily from ethylene propylene diene monomer rubber and used for coolant transfer and circulation in liquid cooling systems. It is commonly applied in data center liquid cooling, server cold-plate cooling, electric vehicle thermal management, energy storage systems, industrial equipment cooling, and electronic thermal management. EPDM offers good resistance to hydrolysis, glycol-based coolants, ozone, aging, and temperature fluctuations, making it suitable for water-based or glycol-water coolant circuits, although it is generally not suitable for long-term exposure to mineral oils, fuels, or highly oily media. These hoses typically require low permeability, pressure resistance, bending flexibility, low extractables, long-term sealing reliability, and strong compatibility with the overall cooling system. In 2025, global Liquid Cooling System EPDM Hose production reached approximately 2040 km, with an average global market price of around 239 USD/m. The production capacity for Liquid Cooling System EPDM Hose in 2025 was approximately 3000 km,. The typical gross profit margin for Liquid Cooling System EPDM Hose between 20% and 40%.

The Liquid Cooling System EPDM Hose market is driven by the increasing adoption of data center liquid cooling, upgrades in electric vehicle thermal management systems, the expansion of liquid cooling solutions in energy storage systems, and growing demand for efficient cooling in industrial equipment. With the rapid growth of AI servers, high-power chips, and high-density racks, cold-plate liquid cooling, auxiliary piping for

immersion systems, CDU connections, and in-rack coolant distribution require flexible, durable, and low-extractable EPDM hoses. In addition, electric vehicles and energy storage systems are raising requirements for glycol coolant resistance, thermal aging resistance, and long-term sealing performance, pushing EPDM cooling hoses toward higher cleanliness, lower permeability, higher pressure resistance, and smaller bend radius. Market competition is mainly concentrated among automotive thermal management hose manufacturers, industrial rubber hose suppliers, and data center liquid cooling component providers.
