The global Liquid Detergent Thickener market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Liquid detergent thickener is a substance added to liquid detergents to increase their viscosity and improve their performance. It is used to maintain the desired consistency of the detergent and prevent it from separating or settling. Liquid detergent thickener can be natural or synthetic and is typically added in small amounts to the detergent formulation. Common examples of liquid detergent thickeners include natural gums, cellulose derivatives, and synthetic polymers. The use of liquid detergent thickener helps to improve the overall performance of the detergent, including its cleaning power, foaming ability, and stability.
