A liquid diaphragm pump is a positive displacement pump that uses compressed air, electricity or liquid pressure as a power source to transport various media through the reciprocating motion of the diaphragm in the pump body. It is mainly composed of an actuator and a valve. The actuator drives the diaphragm, and the movement of the diaphragm causes the fluid in the pump body to be sucked in and discharged. Liquid diaphragm pumps have the characteristics of simple structure, convenient maintenance, and reliable operation. They are especially suitable for transporting corrosive, particulate, flammable, explosive or highly toxic liquids.
