Abstracts

The global Liquid-Filled Hard Gelatin Capsules market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The hard gelatin capsules were initially designed as unit dosage forms for the delivery of drugs in granular or powdered form. However, the introduction of pellet technology revolutionised the area of capsule drug delivery systems, helping to combine capsule technology and multi-particulate drug delivery for better therapeutic effect. In the early 1980s, liquid-filled hard gelatin capsules were introduced as an alternative to soft gelatin capsules as they offer multiple advantages such as ease of scalability and manufacturing, faster action, ease of packaging, and higher product stability. Most importantly, unlike softgels, hard gelatin capsules offer the possibility of combination filling wherein drugs can be encapsulated in the form of beads, microtablets, and pellets in combination with the liquid formulation. Not only this allows to incorporate multiple incompatible drugs in a single capsule but moreover, it creates a formulation that is way more aesthetic and appealing to the consumers.
