According to our (Global Info Research) latest study, the global Liquid Floated Gyroscope market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Liquid floated gyroscope, also known as a fluid-based gyroscope or liquid ring gyroscope, is a type of sensor or device used for measuring angular velocity or orientation. It operates on the principle of utilizing a rotating liquid, typically a viscous fluid or a gas-liquid mixture, as the sensing element. The gyroscope"s sensitive axis is aligned with the desired measurement direction, and as the gyroscope rotates, the liquid experiences forces due to angular motion, resulting in measurable changes that are used to determine the gyroscope"s angular velocity or orientation.
