Abstracts

According to our (Global Info Research) latest study, the global Liquid Flow Screed market size was valued at USD 1800.7 million in 2023 and is forecast to a readjusted size of USD 2697.4 million by 2030 with a CAGR of 5.9% during review period.

Liquid flow screed is self-levelling. No vibration is necessary to remove bubbles and densify the liquid mass. Due to the easy consolidation thickness can sometimes be reduced in comparison to conventional screeds. This minimises heat storage leading to a floor that reacts quickly to user requirement hence raising the efficacy of underfloor heating.

A liquid floor screed will have a more even surface than a hand laid semi-dry traditional screed and because it is denser sound is deadened and heat transfer speeded up. Better heat transfer (aka increased thermal conductivity) can be advantageous when underfloor heating is in place. Anhydrite screeds are even more thermally conductive than their cement equivalents.

The Global Info Research report includes an overview of the development of the Liquid Flow Screed industry chain, the market status of Residential (Pumpable Calcium Sulphate Screed, Pumpable Cement Based Screed), Commercial (Pumpable Calcium Sulphate Screed, Pumpable Cement Based Screed), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Liquid Flow Screed.
