According to our (Global Info Research) latest study, the global Liquid-Gas Heat Exchanger market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A liquid/gas heat exchanger is a device used to transfer heat, typically to regulate the temperature difference between fluids (liquid or gas). Its main function is to transfer thermal energy between two fluids so that the temperature difference between them is reduced. This type of equipment is common in many industrial and household applications. The basic working principle of a liquid/gas heat exchanger is to transfer heat from one fluid to another through thermal conduction. Typically, it consists of a heat-sensitive surface through which two fluids flow separately. When one of the fluids is hotter than the other, heat is transferred from the higher-temperature fluid to the lower-temperature fluid, causing their temperatures to equalize.
