The global Liquid Ice Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A liquid ice machine is an ice maker used to make liquid ice or slurry ice. Slurry ice consists of millions of ice 'micro-crystals'. The small size of the ice particles results in a greater heat transfer area than other types of ice and as a result, faster cooling. It is commonly used in a wide range of industries, such as cooling and storage of fish, produce, poultry and other perishable products.

This report studies the global Liquid Ice Machine production, demand, key manufacturers, and key regions.
