Abstracts

The global Liquid Medical Warmer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The liquid medical warmer warms blood or fluids before infusions are given to patients. It is used when large infusions of cold fluids are required. This is very necessary when a patient has suffered severe trauma and requires massive blood transfusions. But once a patient's body begins to cool, a blood warmer won't provide significant benefit; it's designed to prevent heat loss, not reverse it.

This report studies the global Liquid Medical Warmer production, demand, key manufacturers, and key regions.
