The global Liquid Metal Thermal Pad and Thermal Paste market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Liquid metal thermal pads have high thermal conductivity, plasticity, good chemical stability and high temperature resistance. Liquid metal thermal pastes have the characteristics of good filling effect, easy application and relatively low price. When selecting liquid metal thermal pads and thermal pastes, they need to be evaluated based on the requirements and conditions of the specific application.

Liquid metal thermal pads and thermal pastes are materials used to improve thermal conductivity efficiency, and are different in forms, applications and characteristics. The liquid metal thermal pad is a flexible thermal conductive material, usually composed of metal particles and polymer matrix, with high thermal conductivity and plasticity. The liquid metal thermal paste is a semi-solid material with high thermal conductivity, usually composed of fillers and adhesives with high thermal conductivity. It is used to fill small gaps between metal parts, fill uneven surfaces, and improve thermal conduction efficiency.
