Abstracts

The global Liquid Molasses market size is expected to reach $ 9520 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Liquid Molasses is a highly viscous liquid by-product generated during the sugar production process, primarily derived from sugarcane, sugar beet, and other sugar-containing crops after juice extraction, evaporation, crystallization, and sugar recovery. Unlike solid or powdered molasses products, liquid molasses maintains its natural syrup form and is characterized by high soluble sugar content, good fluidity, and excellent fermentation properties. It mainly consists of sucrose, glucose, fructose, minerals, organic acids, and small amounts of proteins and other nutrients, typically featuring a dark brown to black color, high viscosity, and distinctive sweet flavor. Based on raw material sources, liquid molasses is mainly categorized into Cane Liquid Molasses and Beet Liquid Molasses. Due to its high energy value, fermentable sugars, and functional properties, liquid molasses is widely used in animal feed, fermentation industries such as ethanol and yeast production, food processing, agricultural fertilizers, and bio-based product manufacturing, serving as an important value-added product in the global sugar industry supply chain.

In 2025, global Liquid Molasses production reached approximately 38 Million Tons , and average price was USD 180/Ton , with gross margin 30% .
