According to our (Global Info Research) latest study, the global Liquid and Solid Phase Peptide Synthesis market size was valued at USD 398.2 million in 2023 and is forecast to a readjusted size of USD 521.3 million by 2030 with a CAGR of 3.9% during review period.

Solid phase peptide synthesis (SPPS) is a technique for peptide synthesis. It can be defined as a process in which a peptide anchored by its c-terminus to an insoluble polymer is assembled by the successive addition of the protected amino acids constituting its sequence. Liquid-phase peptide synthesis is a hybrid method that combines the advantages of solution-phase and solid-phase chemistry. The approach is best suited for the synthesis of short peptides (up to 20 amino acids) for purity-sensitive applications such as: Therapy.
