The global Liquid Nitrogen Cryosurgical Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Liquid nitrogen cryosurgical equipment, also known as cryotherapy equipment, is medical equipment used in cryosurgery—a medical procedure that involves the application of extremely cold temperatures to treat various conditions, typically using liquid nitrogen as the cooling agent. Cryosurgery is a minimally invasive technique that can be used to destroy abnormal or diseased tissues by freezing them.

Cryosurgery is commonly used in dermatology, gynecology, oncology, and other medical specialties. It offers several advantages over traditional surgical methods, such as minimal scarring, reduced pain, and faster healing times.
