Abstracts

Nitrogen is one of the most widely consumed nutrients of all macro and trace elements required for plant growth. It is used to build amino acids, produce proteins, and participate in almost all biochemical reactions in plants. Insufficient use of nitrogen in soil is a common problem that farmers often see. Therefore, additional liquid nitrogen fertilization is required to eliminate this problem. Urea, ammonium nitrate, ammonium sulfate, and calcium nitrate are usually nutritional sources of liquid nitrogen. In addition, various combinations of nutrients are manufactured and used to provide nutrients to plants. Therefore, global demand for liquid nitrogen fertilizers remains high.

According to our (Global Info Research) latest study, the global Liquid Nitrogen Fertilizer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
