## Abstracts

According to our (Global Info Research) latest study, the global Liquid Organic Hydrogen Carriers market size was valued at US\$ 237 million in 2024 and is forecast to a readjusted size of USD 1585 million by 2031 with a CAGR of 29.4% during review period.

Liquid Organic Hydrogen Carriers (LOHC) are liquid compounds that can chemically bind and release hydrogen, providing a safe and reversible method for hydrogen storage and transport. The use of liquid organic hydrogen carriers (LOHC) is an alternative to transporting hydrogen without the need for pipeline infrastructure or hydrogen liquefaction. Instead, organic materials are hydrogenated at the hydrogen production source, transported to their destination, and dehydrogenated to release the hydrogen for use.

The statistic scope is Liquid Organic Hydrogen Carriers (LOHC) system, the whole market in this report.

The market for liquid organic hydrogen carriers is driven by the potential of LOHC technology as a safe and efficient hydrogen storage solution. LOHC allows for the reversible storage and release of hydrogen at moderate temperatures and pressures, making it suitable for various applications, including stationary power generation and hydrogen refueling infrastructure. The demand for scalable and cost-effective hydrogen storage technologies contributes to the growth of this market.
