## Abstracts

The global Liquid Organic Hydrogen Storage (LOHC) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The basic principle of liquid organic hydrogen storage (LOHC) technology is to use liquid organic matter containing unsaturated carbon bonds as a hydrogen storage carrier, through hydrogenation-dehydrogenation reaction with hydrogen, to realize the process of hydrogen reversible storage and carrier recycling. The unsaturated liquid organic matter before hydrogenation is usually called a liquid hydrogen storage carrier, and the product after hydrogenation is called a hydrogen storage organic liquid. Typical liquid hydrogen storage carrier materials include benzene, toluene, xylene, carbazole, nitrogen ethyl carbazole, etc.
