## Abstracts

The global Liquid Photosensitive Solder Resistant Ink for FPC market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Liquid photosensitive solder resistant ink for FPC is a special coating specifically used for solder resistant coatings on flexible circuit boards (FPCs). Flexible circuit board is a flexible circuit board made of thin film substrate, commonly used in electronic products that require bending and folding. The main characteristics and functions of liquid photosensitive solder resistant ink for FPC include: liquid photosensitivity: This ink has liquid photosensitive properties and can form the required patterns and structures through exposure and development processes. After exposure, the ink in the exposed area will solidify, while the ink in the unexposed area can be developed and dissolved. Solder resistance: Liquid photosensitive solder resistant ink forms a covering layer after curing, which is used to protect the circuit on the FPC and prevent thermal effects during welding and erosion of the welding material on the circuit. Insulation performance: This ink has good insulation performance, which can isolate different circuit layers on the FPC and prevent mutual interference between circuits. Heat resistance: Liquid photosensitive solder resistant ink needs to have high heat resistance to prevent melting or damage during the welding process. Flexibility: Due to the need for flexible circuit boards to maintain stability during bending and folding, liquid photosensitive solder resistant ink must have a certain degree of flexibility to adapt to the shape changes of FPCs. Liquid photosensitive solder resistant ink plays an important role in the manufacturing process of FPC, as it can protect the circuits on the FPC and ensure its reliability and performance. With the development of flexible electronic technology, liquid photosensitive solder resistant ink for FPC will continue to be widely used and continuously meet the requirements of high performance and high

reliability.
