## Abstracts

The global Liquid Potassium Methoxide market size is expected to reach \$ 201 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Liquid Potassium Methoxide refers to the solution form of strongly alkaline organic metal compounds generated by the reaction of metal potassium or potassium hydroxide with anhydrous methanol in methanol, usually present in a certain mass fraction, with a common industrial specification of 25% to 32%. Its essence is a highly active alcohol salt alkali catalyst, which has the characteristics of fast reaction rate, high catalytic efficiency, and relatively controllable side reactions. It is widely used in the fields of oil ester conversion to biodiesel, organic synthesis reactions, pharmaceutical and fine chemical intermediate preparation, etc. It is highly sensitive to moisture and impurities, and usually requires sealing and inert gas protection during storage and use. In 2025, global Liquid Potassium Methoxide production reached approximately 42.37 K MT, with an average global market price of around US\$ 3,461 per MT.

Liquid Potassium Methoxide is a typical process chemical, and its demand structure is highly dependent on downstream applications. Among them, biodiesel and renewable fuels are the largest sources of demand, and their market size is highly related to various countries' biofuel policies, raw material oil supply, and energy price cycles, thus showing certain policy drivers and periodic fluctuations; In the field of fine chemistry and pharmaceutical synthesis, although the amount of potassium methoxide solution is relatively small, it requires higher purity, moisture control, and batch stability, and has better profit levels and customer stickiness. Overall, the technological barriers in this market do not lie in chemical reactions themselves, but in continuous production, safe storage and transportation systems, stable control of concentration and moisture, and the ability to customize different process windows. In the future, industry competition will shift from simple price competition to safety compliance, supply stability, and application

service capabilities. Suppliers with large-scale equipment and deep downstream binding capabilities are more likely to maintain their advantages in fluctuating cycles.
