According to our (Global Info Research) latest study, the global Liquid Rocket Propellant market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Liquid rocket propellant is a liquid chemical substance, either a single compound or a mixture, that provides the energy and mass for a liquid rocket motor. Liquid propellant converts chemical energy into heat energy through oxidation or decomposition reactions in the combustion chamber, generating a high-temperature and high-pressure gas product, which is then accelerated by nozzle expansion, converting thermal energy into kinetic energy.
