Abstracts

The global Liquid Shims market size is expected to reach \$ 1231 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global liquid shim production reached approximately 35 kilotons, the average price is 25000 usd/ton. Liquid Shims is a new type of polymer static sealing material in liquid state. It is formulated with synthetic rubber as the main component, and other resins, fillers and additives are added. It is a semi-dry, viscoelastic liquid gasket. After coating and drying, it forms a rubber-like elastomer, and has good coating properties, sealing properties, shock resistance, impact resistance and other properties.

Market Concentration and Key Players:

Internationally, the liquid gasket market concentration is relatively high, mainly concentrated in Europe, America and Japan and other developed countries. For example, Henkel and 3M and other large manufacturers; from the domestic point of view, there is still a lot of room for development of liquid gaskets.

Manufacturing Processes and Market Trends:

The core of the manufacturing process of liquid gasket lies in accurately coating liquid polymer material on the sealing surface through dispenser, and then forming it into customized gasket through curing reaction site. Its technical development focuses on material innovation and continuous improvement of process precision, such as using ultraviolet curing liquid rubber with transparent mold to greatly shorten the molding time, or developing intelligent gasket with pressure sensing layer and liquid metal layer to realize viscosity self-adaptation.

The market trend shows a steady growth trend, which is mainly driven by the strong demand for efficient sealing solutions in the fields of industry 4.0, intelligent manufacturing promotion and chemical industry, energy and new energy vehicles. Among them, the proportion of environmentally friendly gaskets has increased significantly due to stricter regulations, and the products are rapidly iterating towards

high performance, corrosion resistance and low VOC. Meanwhile, the automation and intelligent upgrading of the industrial chain are profoundly changing the competitive pattern of the industry, promoting local enterprises to accelerate technology catch-up and high-end market expansion.
