Abstracts

Liquid Silicone Rubber injection machines are specialized equipment used for the injection molding of liquid silicone rubber materials. These machines are designed to precisely control the injection process, allowing for the production of high-quality silicone rubber parts with complex geometries and tight tolerances. LSR injection machines typically consist of a feeding system for liquid silicone rubber, a heating unit to melt the material, an injection unit for injecting the molten silicone into a mold cavity, and a clamping unit to hold the mold in place during the injection process.
