According to our (Global Info Research) latest study, the global Liquid Specific Gravity Refractometer market size was valued at US\$ 245 million in 2025 and is forecast to a readjusted size of US\$ 325 million by 2032 with a CAGR of 4.2% during review period.

A liquid pycnometer, also known as a density refractometer or a pycnometer, is an instrument used to measure the specific gravity and refractive index of a liquid sample. It combines the ability to measure the density (specific gravity) and refractive index of a sample, providing measurements of these two key parameters in the same device. These instruments are used in various fields for quality control, production monitoring, research analysis, etc. Future liquid specific gravity refractometers may achieve higher measurement accuracy to meet the demand for precise data. This is very important for demanding industrial and laboratory applications.
