Abstracts

The global Liquor Brewing Automatic Production Line market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In recent years, the share of mid-to-high-end liquor in the liquor industry has grown rapidly. Although the overall liquor production has declined, the industry's operating income and net profit have maintained steady growth. In particular, the profitability of high-end liquor has an obvious advantage, while the profit growth rate of sub-high-end liquor is the fastest, while the profitability of mid- and low-end liquor continues to be under pressure.

In 2022, leading Moutai and Wuliangye took the lead in proposing to expand production. Sub-high-end liquor companies such as Jinshiyuan, Shanxi Fenjiu, Shuijingfang, and Shede also followed suit, with a total investment of about 36 billion yuan. Wine companies have mentioned technological transformation, transformation, and intelligent methods in their production capacity expansion projects. According to 'Analysis and Discussion on Fully Automated Fuhexiang Liquor Brewing Process Equipment', automatic brewing per ton of raw wine reduces steam consumption by more than 15%, water consumption by 19%, labor force by 72%, grain yield by 2%, and high-quality rate by more than 5%.

Liquor technological transformation has brought new opportunities for packaging equipment and production lines. Liquor technological transformation can realize the informatization and digitization of the brewing process. Through data statistics and analysis, real-time query and monitoring, on-site-remote dual control and retrospective query and other functions, process parameterization, controllability, and standardization

can be realized, and production efficiency and product quality can be improved.
