Abstracts

The global Lithium 12-Hydroxystearate market size is expected to reach \$ 58.27 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Lithium 12-Hydroxystearate is a lithium soap compound produced by the reaction of 12-hydroxystearic acid with lithium hydroxide or other lithium compounds. It is typically supplied as a white to off-white powder, granule, or wax-like solid. Chemically, it is a lithium salt of hydroxylated fatty acid, known for its thickening capability, lubricity, water resistance, and thermal stability.

In 2025, the global production of Lithium 12-Hydroxystearate reached 2,360 tons, with an average selling price of US\$ 17,590 per ton. Industry gross margins are estimated at approximately 24%.

The future market for Lithium 12-Hydroxystearate is expected to grow steadily, mainly driven by demand for lithium-based greases. As a key thickener for lithium greases and some lithium complex greases, Lithium 12-Hydroxystearate is widely used in automotive components, construction machinery, metallurgy, mining, bearings, electric motors, wind power equipment, and general industrial lubrication. The trend toward higher load, higher speed, longer service life, and lower maintenance requirements in industrial equipment will support the use of this product in high-performance greases with improved dropping point, water resistance, shear stability, and durability. Growth in electric vehicles, wind power, rail transit, automation equipment, and advanced manufacturing will also create additional demand for premium lithium grease formulations. However, the industry may face pressure from lithium price volatility, stricter environmental requirements, and competition from alternative grease systems

such as calcium sulfonate complex greases, calcium-based greases, and polyurea greases.

This report studies the global Lithium 12-Hydroxystearate production, demand, key manufacturers, and key regions.
