Abstracts

According to our (Global Info Research) latest study, the global Lithium Aluminosilicate (LAS) Glass-Ceramics market size was valued at US\$ 896 million in 2025 and is forecast to a readjusted size of US\$ 2897 million by 2032 with a CAGR of 18.5% during review period.

In 2024, global lithium aluminosilicate (LAS) glass-ceramics production reached 39,879 kilotons, with an average selling price of US\$18,370.37 per ton. Lithium aluminosilicate glass-ceramics utilize materials containing lithium (LiO?), rather than the sodium oxide (Na?O) found in alkaline aluminosilicate glass. Lithium ions (Li) diffuse faster than sodium ions (Na), allowing for the formation of deeper compression layers. Lithium aluminosilicate glass-ceramics are primarily used in cover glass for smartphones and tablets.

The aluminosilicate glass business has experienced rapid revenue growth and boasts high customer concentration. Furthermore, the aluminosilicate glass business has high but volatile gross profit margins. Aluminosilicate glass prices are closely tied to the price of its raw material, lithium carbonate, and R&D expenditures are high. Upstream aluminosilicate glass manufacturers enjoy higher gross profit margins, while midstream manufacturers, such as those involved in aluminosilicate cover glass, enjoy larger revenue streams. The iPhone 12 debuted Corning's Ceramic Shield cover glass in 2020. Since then, Chinese brands, led by Huawei and Honor, have incorporated lithium aluminosilicate (LAS) glass into their high-end models. Continuous upgrades and iterations in recent years have continuously enhanced the performance of their cover glass.
