Abstracts

The global Lithium Battery Aluminum Case market size is expected to reach \$ 1312 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Lithium ion battery aluminum case refers to the structural components of the battery shell made of aluminum or aluminum alloy materials through stamping, stretching, extrusion, or machining processes. It is mainly used to encapsulate and protect lithium-ion cells, while also providing structural support, sealing isolation, and safety protection functions. It is usually composed of a shell and a top cover, which contains key components such as electrodes and electrolytes inside, and is equipped with safety designs such as explosion-proof valves to achieve lightweight while ensuring battery strength and airtightness. It is an important component of power batteries, energy storage batteries, and some consumer batteries. In 2025, global Lithium Battery Aluminum Case production reached approximately 3,027 M Units, with an average global market price of around US\$ 289 per unit.

The aluminum shell of lithium batteries is a key structural component in the power battery industry chain, and the development of the industry highly relies on the growth of new energy vehicles and energy storage markets. Currently, Chinese enterprises dominate the global production capacity and supply chain, with scale and cost advantages, while overseas markets continue to layout in high-end manufacturing and supporting systems. With the development of batteries towards large capacity, high energy density, and high safety, aluminum shell products are accelerating their upgrade towards large-sized integrated design, high-strength materials, and integrated safety structures. At the same time, they are seeking a balance between lightweight and cost control, and the overall market is maintaining stable growth, showing a trend of

simultaneous development towards top concentration and technological upgrades.
