Lithium battery ceramic fiber paper is a high-performance diaphragm material used in lithium-ion batteries, with excellent high temperature resistance, chemical corrosion resistance and electrical insulation properties. This fiber paper is mainly made of high-purity alumina silicate fibers, which can maintain stability and structural integrity in high temperature environments. The main function of lithium battery ceramic fiber paper is to serve as a diaphragm inside the battery, separating the positive and negative electrodes to prevent internal short circuits in the battery, while allowing ions to move freely in the electrolyte, thereby ensuring the normal charging and discharging process of the battery.
