## Abstracts

The global Lithium Battery Electroplating Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lithium battery electroplating equipment refers to a type of equipment used for the electroplating process in the production of lithium-ion batteries. This equipment is used to deposit a thin layer of metal on the surface of the battery electrodes, which improves their performance and durability. The electroplating process involves immersing the battery electrodes in a solution containing the metal ions to be deposited, and then applying an electric current to facilitate the deposition of the metal ions onto the electrode surface. The equipment typically includes a plating tank, power supply, electrodes, and monitoring and control systems.
