Abstracts

According to our (Global Info Research) latest study, the global Lithium Battery Equalizers market size was valued at US\$ 1873 million in 2025 and is forecast to a readjusted size of US\$ 4282 million by 2032 with a CAGR of 12.5% during review period.

In 2025, global Lithium Battery Equalizer output reached about 140 million units and global capacity of around 160 million units. The average price is about USD 13 per unit, with gross margins near 35%. Lithium Battery Equalizers are electronic devices used in lithium-ion battery packs to equalize the voltage, state of charge (SOC), or energy levels among individual cells connected in series, thereby improving battery performance, safety, lifespan, and usable capacity. They operate through passive balancing (dissipating excess energy as heat) or active balancing (transferring energy between cells using capacitors, inductors, or transformers). Lithium battery equalizers are widely integrated into Battery Management Systems (BMS) for electric vehicles, energy storage systems, telecom backup power, industrial equipment, marine batteries, and consumer electronics. The supply chain begins with upstream suppliers of semiconductor ICs, microcontrollers, MOSFETs, power inductors, transformers, capacitors, current sensors, PCBs, and connectors. Midstream manufacturers design and produce standalone battery equalizers, active balancing modules, and integrated BMS balancing solutions. Downstream customers include battery pack manufacturers, EV OEMs, energy storage system integrators, telecom power providers, industrial equipment manufacturers, marine and RV battery suppliers, and consumer electronics producers, who incorporate equalization technology to enhance battery reliability and operational efficiency.
