## Abstracts

According to our (Global Info Research) latest study, the global Lithium Battery Film-Forming Additive market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main function of the lithium battery film-forming additive is to form a structurally stable SEI film on the surface of the negative electrode. The excellent SEI film has organic insolubility, allowing lithium ions to freely enter and exit the electrode while solvent molecules cannot pass through, thereby preventing solvent molecules from destroying the electrode structure. Improve the cycle efficiency and reversible capacity of the battery.
