## Abstracts

The global Lithium Battery Golf Caddy market size is expected to reach \$ 885 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

A Lithium Battery Golf Caddy is a battery-powered electric golf trolley or push caddy that carries a golfer's bag during walking rounds, using lithium batteries instead of traditional lead-acid power systems. The category is defined by portability, long cycle life, lighter weight, and increasingly smart features such as remote control, downhill braking, follow mode, and GPS integration. It is different from ride-on golf carts and also excludes standalone replacement battery packs. In 2025, Global Lithium Battery Golf Caddy sales are estimated at 430 k units, with an average ex-works price of 1,420 US\$/unit and global capacity of about 670 k units/year, with a gross margin range of 24%-36%.

The market is mainly driven by the upgrade of the walking-golf experience and the ongoing shift from lead-acid to lithium power systems. Lithium batteries make electric caddies lighter, more compact, and easier to own, while remote control, follow mode, downhill braking, and smart navigation features are pushing the product from a niche convenience tool toward a premium personal mobility accessory for golfers.
