The global Lithium Battery Material Crushing Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The upstream and downstream of the industrial chain of lithium battery material crushing equipment mainly include the following aspects: upstream: mainly the production and suppliers of lithium battery materials, such as lithium cobalt oxide, ternary materials, lithium iron phosphate, lithium titanate, lithium carbonate, graphite, silicon-based materials, etc., as well as enterprises that provide related technical support and services, such as temperature and humidity monitoring equipment, cooling agents, intelligent temperature control systems, etc. Midstream: mainly manufacturers and users of lithium battery material crushing equipment, downstream: mainly the ultimate beneficiaries of lithium battery material crushing equipment, such as lithium battery manufacturers, new energy vehicle companies, consumer electronics companies, etc. The industry market prospect of lithium battery material crushing equipment is relatively broad. According to the company's survey and analysis, in 2022, the global lithium battery market will exceed 1100.0GWh, and the Chinese lithium battery market will be 750.0GWh, accounting for nearly 70% of the global market. The market share has further increased, with a compound annual growth rate of about 12%. In 2022, the operating income of the lithium battery industry will be 475.433 billion yuan, a year-on-year increase of 125.65%. Among them, China is the world's largest producer and consumer of lithium batteries, accounting for nearly 60% of the global lithium battery market. With the rapid development of new energy vehicles, consumer electronics and other fields, the demand for lithium battery materials will continue to grow, which will drive the growth of demand for lithium battery material crushing equipment.

Lithium battery material crushing equipment is a kind of equipment for ultrafine crushing and grading of lithium battery positive and negative electrode materials, diaphragm materials, etc., which can improve the utilization rate, performance and safety of lithium battery materials. Lithium battery material crushing equipment is suitable 100 mesh-10000 mesh (150um-1um), use compressed gas to pass through the feeding injector to bring the crushed raw materials into the crushing chamber, driven by the high-speed airflow injected by multiple nozzles, spray them on the crushing wall in a tangential manner to achieve frictional crushing Effect. The grinding fineness is controlled by adjusting the longitudinal depth of the grinding chamber, adjusting the grinding pressure or feeding speed. Compared with the fluidized bed jet mill, the controllability of the crushing fineness is poor.
