## Abstracts

The global Lithium Battery Recycling Services market size is expected to reach \$ 6455 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Lithium-ion battery recycling services involve the collection, transportation, and processing of used lithium-ion batteries from electric vehicles, consumer electronics, and energy storage systems. The processing includes sorting, discharging, dismantling, mechanical separation, and chemical recovery to extract valuable metals such as lithium, cobalt, nickel, and manganese. The recycling process reduces environmental harm, recovers critical resources, and promotes the development of a circular economy for battery materials. These services are crucial for achieving sustainable management throughout the battery's entire lifecycle, complying with environmental regulations, and reducing dependence on primary mineral resources. The lithium-ion battery recycling industry chain includes upstream used battery collection, logistics, and storage. Midstream includes mechanical crushing, chemical leaching, hydrometallurgical or pyrometallurgical recovery, and metal purification. Downstream applications encompass battery manufacturers, chemical suppliers, and metal markets. Supporting services include transportation, regulatory compliance, testing, and consulting to optimize recycling rates and ensure environmental safety. The gross profit margins of major companies in the industry range from 15% to 25%.

The Lithium Battery Recycling Services market is driven by the rapid growth of electric vehicles, renewable energy storage, and portable electronics. Rising demand for lithium, cobalt, nickel, and other critical metals, coupled with stricter environmental regulations, is increasing the need for efficient recycling solutions. Technological advancements in hydrometallurgical and pyrometallurgical recovery processes are

improving metal yield, reducing energy consumption, and minimizing waste. Governments and industry stakeholders are implementing policies and incentives to promote responsible battery recycling. Increasing awareness of sustainability and the circular economy is encouraging companies to adopt standardized recycling practices. As the global battery market continues to expand, the lithium battery recycling industry is expected to grow steadily, supporting resource recovery, environmental protection, and long-term supply chain security.
