## Abstracts

The global Lithium Battery Slurry Mixing Machine market size is expected to reach \$ 115 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

A Lithium Battery Slurry Mixing Machine is a specialized industrial mixing machine designed to homogenize high-viscosity electrode slurries by precisely dispersing active materials, conductive additives and binders in solvent media, ensuring uniform particle distribution and consistency before coating onto current collectors; these mixers often incorporate planetary, dual-shaft, vacuum and shear mixing mechanisms to achieve rapid dispersion, minimize air entrapment and support high throughput production for both cathode and anode materials in advanced battery manufacturing. In 2025, global Lithium Battery Slurry Mixing Machine sales reached approximately 400 Units, with an average price of 180 K US\$/Unit.

The growth of the lithium-ion battery slurry mixer market is primarily driven by the rapid global expansion of electric vehicles and energy storage systems that require high-performance batteries, the increasing demands for consistent electrode quality and higher production throughput which necessitate advanced mixing equipment with precise control and low air inclusion, ongoing investment in battery manufacturing capacity by major OEMs and material producers seeking to localize supply chains, and continuous technological improvements in mixer design that enhance process efficiency, vacuum deaeration and scalability for next-generation battery chemistries. This report studies the global Lithium Battery Slurry Mixing Machine production, demand, key manufacturers, and key regions.
