## Abstracts

According to our (Global Info Research) latest study, the global Lithium Battery Thermal Laminating Machine market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Lithium battery thermal laminating machine is one of the mainstream lamination machines. It thermally laminates the baked positive and negative electrode sheets and separators, then rolls them, cuts them into composite units and then laminates them. Compared with the Z-shaped lamination machine, the biggest feature of the thermal laminating machine is that it can completely slice and stack the positive electrode, negative electrode and separator at one time, which improves the lamination efficiency and the quality of the pole core, and the technical difficulty is higher.
