Uncalcined needle coke, also known as green needle coke, is an uncalcined needle-shaped coke. It is a high-quality petroleum coke with a needle-like crystal structure, primarily used to produce high-performance graphite electrodes. These electrodes are widely used in industries such as steelmaking and non-ferrous metal smelting, playing a crucial role in improving smelting efficiency and product quality.

The uncalcined needle coke industry has shown steady growth in recent years. With the continued development of the global steel and non-ferrous metal smelting industries, the demand for high-performance graphite electrodes is increasing. Additionally, the rise of the new energy industry, such as electric vehicles and energy storage batteries, has also driven demand for graphite materials. However, the production of uncalcined needle coke is influenced by factors such as crude oil supply, refining processes, and environmental regulations. In the future, industry trends will primarily focus on improving product quality, reducing production costs, and strengthening environmental protection measures.
