A lithium brushless drill is an electric tool that uses a brushless motor as a power source. Compared with brushed motors, brushless motors do not have problems such as friction, sparks and noise, and can provide higher efficiency and stability, while having a longer service life and less maintenance requirements. The brushless motor controls the current through an electronic controller according to the rotor position and the magnetic field of the permanent magnet, so that the rotor continues to rotate in different magnetic fields, thereby avoiding the friction and energy loss between the brush and the rotating shaft in traditional brushed motors.
