According to our (Global Info Research) latest study, the global Lithium Carbonate Powder market size was valued at US\$ 877 million in 2024 and is forecast to a readjusted size of USD 1244 million by 2031 with a CAGR of 5.2% during review period.

Lithium carbonate is an inorganic compound, the lithium salt of carbonate with the formula Li_2CO_3 . This white salt is widely used in the processing of metal oxides. It is listed on the World Health Organization's List of Essential Medicines because it can be used as a treatment for mood disorders such as bipolar disorder. Lithium carbonate is an important industrial chemical. Its main use is as a precursor for compounds used in lithium-ion batteries. Glasses derived from lithium carbonate are useful in ovenware. Lithium carbonate is a common ingredient in both low-fire and high-fire ceramic glaze. It forms low-melting fluxes with silica and other materials. Its alkaline properties are conducive to changing the state of metal oxide colorants in glaze, particularly red iron oxide (Fe_2O_3). Cement sets more rapidly when prepared with lithium carbonate, and is useful for tile adhesives. When added to aluminium trifluoride, it forms LiF which gives a superior electrolyte for the processing of aluminium.
