Abstracts

Lithium is the first element of the alkalis in the periodic table, and nature is found like a mixture of isotopes. It is the lightest solid metal, with a soft texture, silvery-white appearance, and low melting point and reactivity. Lithium chemicals own a few significant properties such as high specific heat, huge temperature interval in the liquid state, low viscosity, high thermic conductivity, and very low density. The lithium product is found in different metals such as carbonate, chloride, bromide, hydroxide, and butyl. The lithium chemicals cater to diverse industries such as aluminum production, lubrication, rubber & thermoplastic manufacturing, air treatment, aerospace, and pharmaceutical industries.

This report studies the global Lithium Chemicals production, demand, key manufacturers, and key regions.
