Abstracts

The global Lithium Glass Scintillation Crystal market size is expected to reach \$ 186 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Lithium-ion glass scintillation crystals are inorganic scintillation materials doped with lithium isotopes (primarily ^7Li). They generate visible light signals upon neutron incidence and are commonly used in high-sensitivity detection scenarios such as thermal neutron detection, nuclear radiation measurement, and neutron imaging.

Upstream applications mainly include ^7Li isotope raw materials, high-purity glass substrates, dopants, and high-temperature melting equipment. Downstream applications include neutron detectors, nuclear power and nuclear safety monitoring, scientific instruments, national defense and security inspection, oil and gas logging, and neutron imaging systems.

In 2025, the global price of lithium-ion glass scintillation crystals was \$8,259/kg, with annual sales of approximately 13.78 tons, a global annual production capacity of 15 tons, and an industry profit margin of 30%.

This report studies the global Lithium Glass Scintillation Crystal production, demand, key manufacturers, and key regions.
