A lithium-ion battery roller, often referred to as a battery electrode roller or calendaring machine, is a specialized piece of equipment used in the production of lithium-ion battery electrodes. The primary function of this machine is to compress and densify the electrode materials (either cathode or anode) coated onto metal foils, such as aluminum (for cathodes) or copper (for anodes). This process is essential for enhancing the electrode's performance by improving its density, mechanical strength, and uniformity, which directly influences the battery's capacity, energy density, and cycle life.
