According to our (Global Info Research) latest study, the global Lithium Manganese Oxide for Battery market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Lithium Manganese Oxide (LiMn_2O_4), often abbreviated as LMO, is a compound used as a cathode material in lithium-ion batteries. It is known for its unique three-dimensional spinel structure, which allows for fast lithium-ion diffusion, contributing to high power output. LMO batteries typically have a lower energy density compared to other lithium-ion chemistries, meaning they store less energy per unit weight. This makes them less suitable for applications where long battery life is critical but ideal for high-power applications such as power tools, electric vehicles, and certain portable electronic devices.
