The lithium manganaese oxide (LiMn₂O₄) powder for lithium-ion batteries is an inorganic compound powder, appearing as a dark gray substance that is readily soluble in water. Its chemical formula is LiMn₂O₄. This powder material, composed of lithium (Li), manganese (Mn), and oxygen (O), possesses a specific crystalline structure and is widely recognized as a cathode material. From a microscopic perspective, its crystal structure typically adopts a spinel configuration, where oxygen atoms are arranged in a face-centered cubic packing. Manganese atoms occupy half of the octahedral interstitial sites, while lithium atoms occupy the tetrahedral interstitial sites. This structure allows for the reversible intercalation and deintercalation of lithium ions, thereby enabling the charging and discharging processes of the battery.
