The global Lithium Niobate on Insulator (LNOI) Modulators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lithium Niobate on Insulator (LNOI) modulators are a type of optical modulator used in telecommunications and data communication systems. They are based on the electro-optic effect of lithium niobate, a material that changes its refractive index in response to an applied electric field. LNOI modulators are used in a variety of applications, including optical communications, fiber-optic sensing, and quantum information processing. They are particularly well-suited for high-speed data transmission, where their high modulation efficiency and low power consumption can help to reduce signal distortion and improve system performance.
