A Lithium Niobate Optical Modulator (often referred to as LiNbO₃ modulator) is a type of electro-optic device made from lithium niobate (LiNbO₃) crystal, widely used for modulating light in optical communication systems and other photonic applications. Lithium niobate has favorable properties for nonlinear optics, electro-optic effects, and piezoelectricity, making it ideal for modulation purposes. These modulators use the electro-optic effect of lithium niobate, which allows the modulation of the intensity, phase, or polarization of light when an electric field is applied to the material.
