Abstracts

According to our (Global Info Research) latest study, the global Lithium Silicate market size was valued at USD 77 million in 2023 and is forecast to a readjusted size of USD 70 million by 2030 with a CAGR of -1.3% during review period.

Lithium Silicate is a dispersion of lithium silicate in water, tasteless, alkaline, translucent or transparent, commonly called lithium water glass.

The product's density and viscosity change with its product types, relative density ranges 1.16~1.19(25%). Lithium silicate is soluble in water and alkaline solution, insoluble in alcohol and organic solvent. It releases sol when reacts with acid. It dries itself. After water is evaporated, it can produce a dry film insoluble in water, which is irreversible. It can react with substance with surface hydrophobic group and form a film, for example, it can react with the surface hydroxyl on the surface of glass, cellulose and form a film.

Lithium Silicate is preferred to sodium and potassium silicates for many applications, including concrete surface treatments, specialty paints and coatings, welding rod binders, refractory, ceramics and glazes.

Global Lithium Silicate main players are PQ Corporation, Silmaco, Nippon Chemical, RongXiang, Tongxin, etc. Global top four manufacturers hold a share over 40%. China is the largest market, with a share nearly 35%.

The Global Info Research report includes an overview of the development of the Lithium Silicate industry chain, the market status of Inorganic Binder (
