Abstracts

Lithium tantalate (LiTaO₃, LT) crystal is an important ferroelectric material. It has both chemical and mechanical stability as well as a high optical damage threshold. Lithium tantalate exhibits unique electro-optical, pyroelectric and piezoelectric properties combined with good mechanical and chemical stability and wide transparency range and high optical damage threshold. This makes LiTaO₃ well-suited for numerous applications including electro-optical modulators, pyroelectric detectors, optical waveguide and SAW substrates, piezoelectric transducers etc.

Scope of the Report:

This report focuses on the Lithium Tantalate Crystal in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Lithium tantalate crystal it has excellent piezoelectric electromechanical coupling coefficient, low loss, and high temperature stability, and good high-frequency performance, electro-optical and thermoelectric properties. With the rapid development of communications, information industry development and industrialization of new optoelectronic materials, downstream demand for lithium tantalate crystal keeps increasing.

At present, in developed countries, the lithium tantalate crystal industry is generally at a more advanced level.

The world's large enterprises are mainly concentrated in Japan. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level. However, foreign companies' manufacturing cost is relatively higher, compared with Chinese companies. With the development of Chinese lithium tantalate

crystal production technology, their share in the international market is increasing, and competitiveness in the international market gradually increases. Lithium tantalite (LiTaO₃) is similar to lithium niobate. Both are grown by the czochralski method which yields large, high quality single crystals. Lithium tantalate possesses unique electro-optical, acoustic, piezoelectric and pyroelectric properties, which makes it attractive for numerous applications including electro-optical modulators, pyroelectric detectors, piezoelectric transducers and sensors. It has good mechanical and chemical stability, a wide transparency range and a high optical damage threshold. With the development of 4G LTE, the demand for saw filter will keep on growing in the future, which will promote the demand for lithium tantalate crystal.

The worldwide market for Lithium Tantalate Crystal is expected to grow at a CAGR of roughly 2.3% over the next five years, will reach 190 million US\$ in 2023, from 170 million US\$ in 2017, according to a new GIR (Global Info Research) study.
