Abstracts

According to our (Global Info Research) latest study, the global Lithium Tri-tert-butoxyaluminum Hydride market size was valued at US\$ 29.43 million in 2025 and is forecast to a readjusted size of US\$ 41.28 million by 2032 with a CAGR of 5.0% during review period.

Lithium tri-tert-butoxyaluminum hydride, abbreviated as LTTBA or LTBA, is a mild and highly selective reducing agent. It is commonly used for the selective reduction of acyl chlorides to aldehydes, or for the reduction of ketones and aldehydes in the presence of esters, exhibiting excellent compatibility with other sensitive functional groups.

The upstream core raw materials directly depend on lithium aluminum hydride and tert-butanol. Lithium aluminum hydride, as a basic reducing agent, is highly susceptible to price fluctuations in the lithium and aluminum markets and is classified as a hazardous chemical.

The global sales volume in 2025 is estimated to be approximately 260 tons, with a market price of approximately US\$110 per kilogram. The industry's gross profit margin is in the range of 15%-30%.

Due to its large steric hindrance and mild reactivity, LTBA is used in the construction of chiral drug molecules with highly demanding stereochemical requirements. Downstream industries such as pharmaceuticals, agrochemicals, flavors and fragrances, and functional materials production have a strong demand for reducing agents that offer better reaction selectivity, reduce side reactions, and improve overall yield. This is driving manufacturers to increase product development and optimization efforts, and

actively explore new application scenarios.
