According to our (Global Info Research) latest study, the global Littrow Prisms market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Littrow prisms are optical components consisting of a right-angle prism with a reflective coating on one of its faces, positioned such that light entering the prism is internally reflected at the coating-prism interface and exits the prism parallel to the incident light direction. This configuration produces a deviation angle of 180 degrees between the incident and exiting light beams, making Littrow prisms useful in various optical setups, including spectrometers, lasers, and wavelength selection applications.
